SUMMARY

AI engineer building LLM applications end to end: hybrid-search RAG, tool-using agents with long-term memory, and the evaluation, guardrails and monitoring that show whether each change works. On a 12,730-product shopping assistant, raised right-product-ranked-first from 23% to 43% and agent task success from 7 to 12 of 12 tasks. Published researcher (LoRA fine-tuning of Stable Diffusion; quantum machine learning) and Computer Science teaching assistant.

SKILLS

- **LLM & RAG:** LangGraph, LangChain, retrieval-augmented generation (RAG), hybrid search (PostgreSQL full-text + pgvector, Reciprocal Rank Fusion), cross-encoder reranking, agents and tool calling, conversational memory, prompt engineering, structured output (Pydantic), Chroma, Groq, Cohere
- **Evaluation & LLMOps:** Langfuse (tracing, prompt management, experiments), MLflow, DVC, RAGAS, LLM-as-a-judge, code-graded agent evaluation, guardrails; Arabic NLP (AraBERT), ONNX Runtime, MLflow model registry
- **Backend & Deployment:** Python, SQL, FastAPI, PostgreSQL, SQLAlchemy, Alembic, Docker, Docker Compose, GitHub Actions (CI), pytest, Prometheus, Grafana, Nginx, Gradio, Hugging Face Spaces
- **Machine Learning:** PyTorch, Hugging Face Transformers, Diffusers, LoRA, scikit-learn, XGBoost, pandas, NumPy, spaCy, NLTK

PROJECTS

Shopping Assistant — Conversational product search with long-term memory GitHub

Python · FastAPI · LangGraph · PostgreSQL · pgvector · Cohere · Groq · Langfuse · MLflow · Prometheus · Grafana · Docker

- Built a LangGraph agent that searches a 12,730-product catalogue with hybrid retrieval (PostgreSQL full-text + pgvector HNSW, Reciprocal Rank Fusion, Cohere reranking) and remembers each customer's lasting preferences across conversations.
- Measured retrieval stage by stage on 127 labelled queries with 95% confidence intervals: hybrid top-10 recall 72% vs 56% keyword and 41% vector; reranking lifted right-product-first from 23% to 43% (40-query subset); an HNSW index cut median vector search from 35 ms to 3.1 ms.
- Designed a code-graded agent evaluation (12 tasks × 3 runs, logged to Langfuse and MLflow): prompt v2 passed 12 of 12 tasks vs 7, with 29% fewer paid rerank calls; moving price limits inside search lifted on-target results from 70% to 100%.
- Added input and memory-write guardrails (0 of 21 legitimate facts refused), Langfuse tracing and prompt versioning, Prometheus/Grafana monitoring, 104 automated tests and GitHub Actions CI.

Research Assistant — Agentic RAG over arXiv and the web Live demo · GitHub

Python · LangGraph · LangChain · Chroma · BM25 · FastAPI · Gradio · Docker · Hugging Face Spaces

- Designed a self-correcting LangGraph workflow: query rewriting, hybrid retrieval, relevance grading, cited generation and a reflection step with a bounded retry, using structured outputs for each decision.
- Combined dense (Chroma) and keyword (BM25) retrieval with cross-encoder reranking; a provider factory switches between Groq, Hugging Face, Anthropic and OpenAI with one setting; served through FastAPI and Gradio and deployed on Hugging Face Spaces.

Arabic Banking Intent Classifier — AraBERT fine-tuning with a production-style MLOps pipeline GitHub · Model

Python · PyTorch · Hugging Face Transformers · ONNX Runtime · FastAPI · MLflow · DVC · Docker · Prometheus · Grafana · Locust · GitHub Actions

- Fine-tuned AraBERT on 77 Arabic banking intents (macro-F1 0.919 vs 0.887 for TF-IDF; 0.843 vs 0.719 on an unseen dialect), fixed a leaky validation split, gated promotion in the MLflow registry, and served it as ONNX fp16 behind FastAPI in Docker (image 2.26 GB to 0.95 GB) with Prometheus/Grafana monitoring.

EXPERIENCE

AI Research & Mentorship Engineer — MLOps MENA Community 08/2026 – Present

- Mentor community learners on their MLOps and AI projects: review their work and answer their technical questions.
- Research AI and MLOps topics and write technical material for the community.

Teaching Assistant, Computer Science — Culture and Science City · Giza 03/2026 – Present

- Teach Advanced Operating Systems to 700+ students: processes and threads, CPU scheduling, synchronization and deadlocks, memory management and virtual memory, and file systems.
- Teach a starter MLOps course to about 500 students, modelled on DataTalks.Club's ML Zoomcamp: data preprocessing and cleaning, a linear model trained on a customer-churn dataset, then an industry-standard project layout, experiment tracking with MLflow, and serving the model with FastAPI and Docker.
- Assisted the supervision of two 2025/26 graduation projects: an AI system for social-media trend and emotion analysis, and diabetes detection with machine learning.
- Designed and led 50 Compiler Theory lab sessions for 600+ students; co-taught neural-network and CNN sessions; set Distributed Computing quizzes; led Linear Algebra, Calculus and Information Retrieval tutorials.

Military Service (mandatory) — Egypt 01/2025 – 01/2026

Quantum Research Intern — QUAE (QWorld UAE chapter) · Remote 12/2023 – 03/2024

- Built a quantum machine-learning pipeline for EEG classification: a Quantum Variational Autoencoder for self-supervised denoising, followed by LDA for cognitive-task classification in brain–computer interfaces.
- Evaluated generalisation and computational-complexity trade-offs on noisy neurological time series; results published at the Neurogenomics 2024 Conference.

EDUCATION

Bachelor of Science in Computer Science — Culture and Science City · 6th of October, Giza 10/2020 – 06/2024

Relevant coursework: Machine Learning & AI, Software Engineering, Data Structures & Algorithms.

Diploma in Quantum Computing — QWorld · Remote 10/2023 – 07/2024

Quantum algorithms, quantum machine learning and quantum information; QBronze, QSilver and QNickel certifications.

TRAINING

- ML Zoomcamp (2025) · LLM Zoomcamp (2026) · AI Agents Crash Course (2025) — DataTalks.Club
- MLOps Practitioner Course — MLOps MENA Community (2026)
- Mini-RAG: production RAG systems — Abu Bakr Soliman (2026)
- Hugging Face LLM Course (in progress)
- Generative AI with Large Language Models — DeepLearning.AI
- Natural Language Processing, Deep Learning and Machine Learning Specializations — DeepLearning.AI (and Stanford)
- Applied Text Mining in Python — University of Michigan
- Vector Databases (Pinecone) — 365 Data Science
